

Name: Michael Hooper

My submission fulfils the following conditions to pass:

Software compiles	Yes
Populated Git repo consistent with DLE submission exists	Git link: https://github.com/MichaelHooper36/COMP3016-CW2-Immersive-Game-Technologies-using-OpenGL
OpenGL in C++ with vertex and fragment shaders loaded with a quad displayed and signature feature visible.	List your signature(s): There is a large image to one side that has my face on the “absolute cinema” meme image. https://knowyourmeme.com/memes/absolute-cinema
Write up and video explanation submitted	Filenames: README.md YouTube: https://youtu.be/azwQIB-dhxx

My CW2 project has the following features

Feature	Description	Category	Marks Claimed	Marks Awarded (for ML use)
MVP Implemented	MVP transforms implemented in lines 392 to 468 in CW2.cpp	40-70 Marks	5	
Textures	Mixed textures Rock07-Base-Diffuse.png and Rock07-Base-Normal.png in modelFragmentShader.frag and modelFragmentShader.vert	40-70 Marks	5	
Procedural Content Generation (PCG)	The ground in the middle of the world is a procedurally generated with three different biomes: sand and grass around the bottom and for the bits of terrain that are higher up, they are coloured white for snow.	40-70 Marks	5	
Keyboard/Mouse Movement	The mouse moves the camera, despite it not being very necessary, and the keyboard moves the t-rex. W and S move the t-rex forwards and back respectively and A and D rotate the t-rex.	40-70 Marks	5	
Mixed Textures	Both the t-rex and rock in the corner of the terrain have multiple textures, those being diffuse, specular and normal layers, among others.	Advanced	2.5	
Total Feature Marks			22.5	
Passing Marks			40	
Minimum marks expected (not including aesthetics)			62.5
